

## **Sr. Developer / Lead – Oracle Commerce Cloud**

### **Major Responsibilities include but are not limited to:**

- Consult directly with customers at various levels – functional and technical. Collect and analyze customer requirements to complete accurate scoping and high quality design.
- Collaborate with Project Manager to create the development schedule, including work effort estimates, work breakdown structure, project dependencies, resource allocation, etc.
- Collaborate with the architect to ensure that the architectural vision is realized in the technical specifications and code created
- Provide high quality development contributions while providing technical leadership to developers throughout entire project life cycle. Act as a player coach.
- Contribute to the growth of Oracle Commerce business and improvement of OCC service delivery through the creation and sharing of knowledge on project experiences
- Manage change control process, including project scope control, assessing impact of change requests, estimating work effort for change requests, etc.
- Identify project risks that arise during project execution and elevate them to the architect and/or Project Manager whenever necessary
- Act as technical liaison between all technical resources engaged on the project, whether as part of the Oracle Commerce Consulting team, the customer's team, and / or any 3rdparty teams; help customer understand overall technical direction and progress
- Conduct code reviews throughout the development phase, ensuring that best practices are followed and lessons learned are promulgated to entire team
- Estimate level of effort to code and test moderately difficult to complex requirements
- Create key project deliverables, including technical specifications, unit tests, and tested code
- Submit status updates on all project activities to the Project Manager

### **Candidate Profile:**

- A strong technical background in eCommerce, preferably Oracle Commerce (ATG/Endeca) and Commerce Cloud
- At least 4 years of hands-on experience with development, system configuration, testing and documentation of Commerce solutions.
- Demonstrated expertise in Java and UI development including: Java/J2EE, Java Script framework (Knockout preferred), Bootstrap, JQuery, node.js, HTML/CSS, AJAX
- Experience in writing web services (publishing or consuming)
- Experience writing XML/XSL/XSD.
- Experience with build processes and tools (Ant, Maven, etc.)
- Experience with source control processes & tools (Perforce, Subversion, code branching)
- Experience with code Refactoring and Profiling
- System integration via web services, RESTful services
- Good coding practices (Javadoc, unit testing)
- Knowledge of Cloud technologies and applications is strongly desired.
- Experience working with customers and/or business stakeholders on Commerce implementations.
- Experience with business and technical requirements gathering and analysis.
- Excellent problem solving skills
- Availability to travel and work with a diverse set of Clients and high performing professionals.
- A desire to be part of large, high-impact projects and grow in the process.
- Ability to write and deliver technical documents to internal and external clients
- Understanding of e-commerce eco-system, verticals and online business principles is desired

**Experience:** 4+ years

**Location:** Mumbai
